ABSTRACT

Agricultural development should appropriately oriented on "resource base", which means that the status of natural resources in a region is the central point of planning and implementation. The evaluation of the existence of a region and the location of development based on agro-ecosystem, land suitability and potential / opportunities in the market was done in prioritization of commodities and their alternatives. The purpose of this study was to analyze the factors that affect the income of rice field farmers on Nagari Kapujan Koto Berapak, Bayang subregency in Pesisir Selatan regency. The analytical tool used in this research was multiple linear regression. The results of the research of F-counted probability value smaller than α = 5%, so that the F-counted value obtained is significant. So it can be say that there is a significant relationship between wide of field (X1), the selling price (X2), the cost of farming (X3) number of production (X4), labor (X5), irrigation (D1) all together to the income of rice field farmer (Y) in Nagari Kapujan Koto berapak, Bayang subregency, Pesisir Selatan Regency.

Keywords: wide of field, the selling price, the cost of farming, number of production, labor, irrigation and income.
