

**WINDOWS 7 INSTALLATION SIMULATION APPLICATION DESIGN
ANDROID BASED FOR OPERATING SYSTEM COURSES
AT NURUL FALAH VOCATIONAL SCHOOL, TEBO REGENCY**

By : Indra Saputra

Advisor : Ashabul Khairi, S.T., M.Kom

ESSENCE

The design of the Windows 7 installation simulation application is a mobile application that is designed to run on mobile phones and can be used as a learning medium for students and can be used anywhere and anytime, this application design aims to create an Android mobile application that can facilitate learning the Windows 7 installation system. by using the waterfall research model, the steps include analysis, design, coding and testing. The product design in the form of an installation simulation application has been validated by the examiner lecturer, the assessment from the validation stage is used as material in revising the application. Researchers hope that the application that has been designed can help students understand the installation process of the Windows operating system so that students who do not understand how to install Windows properly and correctly become able and used to it.
